

# Deployment Preparation and Staging

Deployment link: <https://api-cg42.vercel.app/>

The screenshot shows the Vercel web interface for a project named 'api-alisha'. The browser address bar displays 'https://vercel.com/alishazehras-projects/api-alisha'. The navigation menu includes 'Project', 'Deployments', 'Analytics', 'Speed Insights', 'Logs', 'Observability', 'Firewall', 'Storage', and 'Settings'. The 'Project' tab is active, showing the project name 'api-alisha' and buttons for 'Repository', 'Usage', 'Domains', and 'Visit'. Below this, the 'Production Deployment' section is visible, with buttons for 'Build Logs', 'Runtime Logs', and 'Instant Rollback'. The main content area displays a preview of the website, which is a car rental application named 'Avion'. The preview shows a search bar, a 'Products from API's Data' section, a 'Cart Summary' indicating an empty cart, and a footer with 'About Us', 'Quick Links', and 'Contact Info'. To the right of the preview, deployment details are listed: 'Deployment' (api-alisha-9goush9j4-alishazehras-projects.vercel.app), 'Domains' (api-cg42.vercel.app and api-alisha-alishazehras-projects.vercel.app), 'Status' (Ready, Created Jan 30 by alishazehra), and 'Source' (main branch, commit 1a57e9f). At the bottom, an error message states 'Error · Add files via upload' and indicates the deployment was made '55m ago by alishazehra'.

Here I deployed my website on vercel

## Deployment

api-alisha-9goush9j4-alishazehras-projects.vercel.app
